CM.COM - PAYMENTS B.V.

CONFIDENTIAL · STRATEGIC PISP DOSSIER

EUROPEAN OPEN BANKING STANDARDS: BERLIN GROUP NEXTGENPSD2 VS. STET

Comprehensive architectural, regulatory, and integration analysis for direct Pay by Bank initiation across the Netherlands, Germany, France, and Belgium.

APPLICANT ENTITY	SUPERVISORY REGULATOR	AUTHORIZATION TARGET	RETAIL COVERAGE SCOPE
CM Payments B.V.	De Nederlandsche Bank (DNB)	Service 7 (PISP Extension)	>85% Western Europe

STRATEGIC FINDING: EUROPE'S GEOPOLITICAL STANDARDS SPLIT

KEY TAKEAWAY

Under PSD2, European retail banking divided into two non-interoperable regional technical standards: **Berlin Group NextGenPSD2** in Germany (~100%), the Netherlands (~90%+), and domestic Belgium (~70%); and **STET PSD2** across France (~95%).

The Breakthrough: Building a single **STET adapter** in the CM.com Gateway unlocks virtually the entire French retail market (BNP Paribas, Crédit Agricole, Société Générale, BPCE, and Crédit Mutuel) without requiring custom code for individual banks. With our existing Berlin Group engine and a companion STET engine, CM

Payments B.V. achieves sovereign coverage of **over 85% of Western European transaction accounts**.

100%

GERMAN MARKET ON BERLIN GROUP

Sparkassen & Volksbanken auto-onboard via eIDAS certificates.

95%+

FRENCH MARKET ON STET STANDARD

All Top 6 French banking groups share the STET PIS specification.

2 ENGINES

REQUIRED FOR WESTERN EUROPE

1 Berlin Group Engine + 1 STET Engine covers NL, DE, FR, and BE.

1. COMPARATIVE ARCHITECTURE: BERLIN GROUP VS. STET

PROTOCOL SPECIFICATIONS

TECHNICAL DIMENSION	BERLIN GROUP NEXTGENPSD2	STET PSD2 SPECIFICATION	ARCHITE IMPACT
Dominant Geography	Germany, Netherlands, Austria, Belgium (~70%), Nordics	France (~95%), French overseas territories, parts of Belgium	Enables cle geographic in gateway dispatcher.
PIS Initiation Path	`POST /v1/payments/sepa-credit-transfers`	`POST /payment-requests`	Target URL by bank BI table.
Status Inquiry Path	`GET .../sepa-credit-transfers/{id}/status`	`GET /payment-requests/{id}`	Polling / W status endp normalizat
Payload Structure	Flat ISO 20022 JSON (`instructedAmount`, `debtorAccount`, `creditorAccount`)	Nested STET JSON (`initiatingParty`, `beneficiary`, `creditTransferTransaction`)	Separate C serializer s each dialec

TECHNICAL DIMENSION	BERLIN GROUP NEXTGENPSD2	STET PSD2 SPECIFICATION	ARCHITE IMPACT
Application Signing	JWS (RFC 7515 / ING) or Cavage HTTP-Sig (Rabobank)	STET-profile HTTP Signatures (Digest + Date + X-Request-ID)	Both signe the same c **eIDAS QSe**
Transport Security	Mutual TLS (mTLS) with eIDAS QWAC	Mutual TLS (mTLS) with eIDAS QWAC	Universal t handshake all banks.
SCA Redirect Format	Hypermedia: `_links.scaRedirect.href`	Hypermedia: `_links.consentApproval.href`	Normalize URL hande checkout.

3. GATEWAY ENGINEERING ARCHITECTURE

DUAL-ENGINE SPECIFICATION

CM.com's Go gateway (`pay-by-bank-gateway`) utilizes an internal abstract payment interface that marshals checkout requests into the appropriate wire protocol based on the selected bank BIC:

```
// Sample STET Wire Payload Structure for French Banks type STETPaymentRequest
struct { InitiatingParty struct { Name string `json:"name"` }
`json:"initiatingParty"` Beneficiary struct { Name string `json:"name"`
CreditorAccount struct { IBAN string `json:"iban"` Currency string
`json:"currency"` } `json:"creditorAccount"` } `json:"beneficiary"`
CreditTransferTransaction []struct { PaymentID struct { InstructionIdentification
string `json:"instructionIdentification"` EndToEndIdentification string
`json:"endToEndIdentification"` } `json:"paymentId"` InstructedAmount struct {
Amount float64 `json:"amount"` Currency string `json:"currency"` }
`json:"instructedAmount"` RemittanceInformation struct { Unstructured []string
`json:"unstructured"` } `json:"remittanceInformation"` }
`json:"creditTransferTransaction"` }
```

STRATEGIC RECOMMENDATION FOR CM PAYMENTS B.V.

ACTION PLAN

1. **Maintain Berlin Group Engine:** Deploy immediate coverage for the Netherlands and Germany (~1,100 institutions across Sparkassen and Volksbanken with zero per-bank development).
2. **Develop Modular STET Adapter:** Build `adapters/stet` inside the Go gateway. One adapter fulfills the requirements of all Top 6 French banking networks.

3. **Consolidated eIDAS Credentials:** Retain a single QWAC/QSealC certificate pair from an accredited QTSP (e.g. QuoVadis or DigiCert) to satisfy both Berlin Group and STET security mandates.
